

STARLINK

BATTLE FOR ATLAS

COLLECTION TRACKER

Technical Documentation & Source Code Reference

Field	Value
Document Type	Technical Documentation + Complete Source Code
Project	Starlink: Battle for Atlas — Physical Collection Tracker
Stack	HTML5 · CSS3 · Vanilla JavaScript
Dependencies	Google Fonts (Orbitron, Exo 2, Rajdhani) — CDN only
Storage	localStorage (browser) — no backend required
Files	index.html + img/ folder (20 images)
Items Tracked	17 physical releases (16 standard + 1 limited exclusive)
Generated	07 June 2026

This document contains the complete source code, architecture description, and maintenance guide for the Starlink collection tracker. It is intended as a self-contained reference so that the tracker can be rebuilt from scratch if access to the original files is lost.

1. Project Overview & Architecture

The Starlink collection tracker is a single-page web application built entirely with HTML5, CSS3, and vanilla JavaScript — no frameworks, no build tools, no server required. It tracks ownership of all 17 physical Starlink: Battle for Atlas toys released between 2018 and 2019.

Layer	Technology	Purpose
Markup	HTML5	Structure, semantic layout, SVG logo
Style	CSS3 + Variables	Dark space theme, grid layout, animations
Logic	Vanilla JS	Filtering, search, owned tracking, export/import
Data	JSON (inline)	ITEMS array with all 17 products embedded in HTML
Storage	localStorage	Persists owned state across browser sessions
Fonts	Google Fonts CDN	Orbitron, Exo 2, Rajdhani (requires internet)
Images	External img/	20 product photos in img/ folder next to HTML

Important: The tracker requires a web server or browser that allows local file access. Opening index.html directly from the filesystem works in most modern browsers (Chrome, Firefox, Edge) for loading local images. If images do not load, serve the folder via a local HTTP server (e.g. `python3 -m http.server 8080`).

2. File & Folder Structure

The project consists of a single HTML file and an image folder:

starlink/		
■■■ index.html	←	Main application (31 KB)
■■■ img/	←	Product images folder
■■■ starter-ns.jpg	←	Nintendo Switch Starter Pack
■■■ starter-ps4.png	←	PS4 / Xbox One Starter Pack
■■■ sp-lance.jpg	←	Lance Starship Pack
■■■ sp-nadir.jpg	←	Nadir Starship Pack
■■■ sp-neptune.jpg	←	Neptune Starship Pack
■■■ sp-pulse.jpg	←	Pulse Starship Pack
■■■ sp-scramble.webp	←	Scramble Pack (Target/Walmart excl.)
■■■ sp-cerberus.png	←	Cerberus Pack (GameStop excl.)
■■■ pilot-razor.jpg	←	Razor Lemay Pilot Pack
■■■ pilot-eli.jpg	←	Eli Arborwood Pilot Pack
■■■ pilot-kharl.jpg	←	Kharl Zeon Pilot Pack
■■■ pilot-levi.jpg	←	Levi McCray Pilot Pack
■■■ pp-startail.jpg	←	Startail (LIMITED – pre-order EU excl.)
■■■ wp-ironfist.jpg	←	Iron Fist + Freeze Ray Mk.2 Pack
■■■ wp-hailstorm-pnp.jpg	←	Hailstorm + Meteor Mk.2 Pack
■■■ wp-shockwave.jpg	←	Shockwave + Gauss Gun Mk.2 Pack
■■■ wp-crusher.jpg	←	Crusher + Shredder Mk.2 Pack
■■■ pilot-fox.png	←	Fox McCloud (unused – in Switch starter)
■■■ w-flamethrower.png	←	Flamethrower (unused – in starters)

To replace an image: save the new photo with the exact same filename into the img/ folder. Supported formats: JPG, PNG, WEBP. The HTML references images by relative path `img/filename`.

3. Data Model — ITEMS Array

All product data is stored in a JavaScript array called `ITEMS` embedded directly in the HTML. Each item is a plain object with the following fields:

Field	Type	Required	Description
id	string	Yes	Unique identifier — used by localStorage to track ownership. Never change existing IDs.
sec	string	Yes	Section key: 'starter' 'ship' 'pilot' 'wpack'
name	string	Yes	Display name shown as card title (Orbitron font)
sub	string	Yes	Subtitle / platform info shown below name
col	string	Yes	Hex accent colour for this card (#rrggbb)
excl	string	No	Exclusivity note — shown with ★ prefix. null if not exclusive.
img	string	Yes	Relative image path: 'img/filename.jpg'
contains	array	No	List of included items shown as bullet list. Omit for pilot-only packs.
limited	boolean	No	true = limited/exclusive item — activates gold border treatment
limited_note	string	No	Text shown in gold banner at bottom of card (only if limited:true)

Example item — standard:

```
{
  "id": "sp-lance",
  "sec": "ship",
  "name": "Lance Starship Pack",
  "sub": "All Platforms",
  "col": "#26c6da",
  "excl": null,
  "img": "img/sp-lance.jpg",
  "contains": ["Lance (ship)", "Hunter Hakka (pilot)", "Imploder (weapon)"]
}
```

Example item — limited exclusive:

```
{
  "id": "pp-startail",
  "sec": "pilot",
  "name": "Startail",
  "sub": "Pre-Order Exclusive",
  "col": "#fbbf24",
  "excl": "GAME UK / Ubisoft Store EU",
  "img": "img/pp-startail.jpg",
  "limited": true,
  "limited_note": "Pre-order exclusive (EU) \u00b7 Very rare"
}
```

SECTIONS array — controls display order and labels:

```
const SECS = [
  { key: "starter", label: "STARTER PACKS", note: "Includes game + controller mount" },
  { key: "ship", label: "STARSHIP PACKS", note: "Ship + Pilot + Weapon" },
  { key: "pilot", label: "PILOT PACKS", note: "Sold separately" },
  { key: "wpack", label: "WEAPON PACKS", note: "2 weapons per pack" },
];
```

4. HTML Structure

The HTML document is structured as follows:

Element	ID / Class	Purpose
<header>	—	Site header with SVG logo, title H1, stats bar
SVG (inline)	.atlas-icon	Animated planet/orbit logo — pure SVG, no image file
Stats bar	.stats	4 counters: Owned / Total / % Complete / 7 Planets
<div> controls	.controls	Search input, filter buttons, toolbar (owned pill, export/import, view toggle)
<div> toast	#toast	Floating notification for export/import feedback
<div> output	#output	Dynamically rendered section labels + card grids
<script>	—	All JavaScript inline — no external JS files
<footer>	—	Inline-styled legal disclaimer

Card HTML structure (generated by JavaScript for each item):

```
<div class='card [owned] [limited] '>
<div class='card-img'>
<div class='limited-star'>★</div> <!-- only if limited -->
<div class='ph'>...fallback placeholder...</div>
<img src='img/...' loading='lazy'>
<div class='type-badge'>Pilot Pack</div>
<div class='owned-btn [owned] '>✓</div>
</div>
<div class='card-body'>
<div class='card-sub'>sub text</div>
<div class='card-name'>Name</div>
<div class='card-tags'>...</div>
<div class='contains-list'>...</div> <!-- optional -->
</div>
<div class='limited-banner'>...note...</div> <!-- only if limited -->
</div>
```

5. CSS — Design System & Variables

All colours and layout constants are defined as CSS custom properties on `:root`. To retheme the entire application, only these values need to change.

Variable	Value	Usage
--bg	#020810	Page background — very dark navy
--panel	rgba(3, 12, 28, .92)	Card background with transparency
--cyan	#00e5ff	Primary accent — headings, borders, badges
--orange	#ff6d00	Secondary accent — orbital ring, hover effects
--gold	#ffd740	Tertiary — exclusivity star, section headers
--amber	#fbbf24	Limited items — border, star, banner
--green	#00e676	Owned state — button fill, card border
--white	#e8f6ff	Body text — slightly blue-tinted white
--muted	#2a4a6a	Disabled / secondary text
--muted2	#4a7a9a	Slightly lighter secondary text
--border	rgba(0, 229, 255, .12)	Default card border
--border2	rgba(0, 229, 255, .28)	Hover / focus border
--radius	10px	Card border radius
--card-w	220px	Minimum card width (grid auto-fill)
--img-h	240px	Card image area height

Responsive breakpoint: At $\leq 600\text{px}$ viewport, `--card-w` reduces to `160px` and `--img-h` to `185px`, and the `H1` font shrinks to `2.2rem`. No other breakpoints are used.

6. CSS — Component Styles

header / .hdr-bg

- Full-width dark gradient header
- `.hdr-bg::before` — radial cyan glow behind the title
- `.hdr-bg::after` — horizontal gradient line at bottom (cyan → orange → cyan)
- `.atlas-icon` — float animation (`translateY 0 → -9px → 0, 6s infinite`)

.stats

- Flex row of 4 stat counters, max-width `560px`, centred
- clip-path polygon gives angled left/right edges
- `.stat-val` — Orbitron font, `1.9rem`, cyan with glow text-shadow

.filter-btn

- clip-path polygon for angled side edges
- Active state: background = item's col, color: `#000`
- Hover: subtle cyan background tint

.io-btn

- Export and Import buttons — same height as view-toggle (`36px`)
- Hover: cyan border and text
- Import is a wrapping a hidden

.card

- `display:flex flex-direction:column` — ensures limited-banner stays at bottom
- `::before` pseudo — 2px top gradient line, `opacity:0` by default, 1 on `:hover` and `.owned`
- `.card.owned` — green border, dark background
- `.card.limited` — amber border, permanent glow, animated `::before`

.card-img

- `height: var(--img-h)` — fixed height image area
- Background: radial gradient using item's accent colour (18% opacity)
- `img: object-fit:contain` with `padding:10px` — preserves aspect ratio
- `img scale(1.08)` on card hover
- `.ph` (placeholder) — hidden by default, shown via `img.onerror`

.type-badge

- Absolute positioned top-left of image area
- `clip-path` polygon for angled right edge
- On `.limited` cards: left shifts to 28px to clear the ★ star

.owned-btn

- Circular button top-right of image
- Default: transparent with dim cyan border
- `.owned`: solid green fill with glow box-shadow

.limited-banner

- `flex-shrink:0` flowable at bottom of card (after `.card-body`)
- Amber gradient background + top border
- `letter-spacing:2px` text-shadow for glow effect
- `display:none` in list view (`.grid.lv .limited-banner`)

.limited-star

- Absolute ★ in top-left of image area
- `@keyframes glow` — opacity pulse + drop-shadow intensity (2s infinite)

7. JavaScript — Core Functions

mkCard(item, delay) (card generation)

- Creates and returns a complete card DOM element for one item
- Accepts the item object and an animation delay (seconds)
- Appends: card-img (with placeholder, img, badge, owned-btn), card-body, limited-banner if needed
- Binds the owned-btn click handler inline — updates owned Set + localStorage + calls updateStats()
- Sets mouseenter/mouseleave border/shadow using item's accent colour

render() (rendering)

- Clears #output and re-renders all visible sections and cards
- Reads the search input value and the AT (active type filter) variable
- For each section in SECS: filters ITEMS by sec key and search query
- Search matches against: name, sub, excl, and any string in contains[]
- Appends section label div + grid div + cards to #output
- Updates countPill text; calls updateStats()

updateStats() (statistics)

- Reads ITEMS.length (total) and owned.size (count of owned items)
- Updates: #statOwned, #statTotal, #statPct (rounded %), #totalCount, #ownedCount
- ownedCount uses textContent (not innerHTML) with unicode ✓ char (\u2713)

setView(mode) (view toggle)

- Accepts 'grid' or 'list' as mode — sets VM variable
- Toggles .active class on #gvBtn and #lvBtn
- Calls render() — the grid re-renders with .lv class if list mode
- List mode: cards display as flex-row, image 90x90, body flex-row, no contains-list

Filter buttons (forEach) (filtering)

- Created dynamically from the TF array: ['All','starter','ship','pilot','wpack']
- Click handler: removes .active from all, sets AT variable, calls render()
- Active button styled with item's SC colour as background (text black)
- FL object maps filter key to display label for the button text

State variables:

Variable	Type	Initial	Description
owned	Set<string>	localStorage	Set of item IDs the user has marked as owned
AT	string	'All'	Active type filter — one of: All/starter/ship/pilot/wpack
VM	string	'grid'	View mode — 'grid' or 'list'

localStorage key: slbfa6_owned — stores a JSON array of owned item IDs. The key version suffix (6) was incremented each time the item list changed significantly to avoid stale data.

8. JavaScript — Export / Import

The export/import system allows owned state to be transferred between devices or browsers without a server. The exchange format is a simple JSON file.

Export file format:

```
{
  "version": 1,
  "exported": "2026-03-29",
  "owned": ["sp-switch", "sp-lance", "pp-razor", "wp-ironfist"]
}
```

exportCollection()

Builds the JSON object with version, ISO date, and owned array. Creates a Blob, generates a temporary object URL, triggers an <a> click to download, then revokes the URL. Filename: starlink-collection-YYYY-MM-DD.json. Shows a toast notification with the count of exported items.

importCollection(event)

Reads the selected file via FileReader.readAsText(). Parses JSON, validates the owned field is an array, filters IDs against the known ITEMS set (unknown IDs are silently skipped). Clears the owned Set and repopulates it with valid IDs, saves to localStorage, calls render(). Resets the file input value after processing to allow re-importing the same file.

showToast(msg, ok)

Displays a fixed-position notification at the bottom centre of the screen. ok=true uses cyan colour (success); ok=false uses red (error). Auto-hides after 2.8 seconds via setTimeout. Clears previous timer if called again before timeout.

9. Limited Items — Visual Treatment

Items with limited: true in their data object receive special visual treatment to distinguish them from regular items.

Visual Element	CSS Class / Rule	Description
Amber border	.card.limited	border-color: rgba(251,191,36,.5) + box-shadow glow
Top line	.card.limited::before	Gradient line always visible (opacity:1) — amber colour
Animated star	.limited-star	★ fixed top-left of image; @keyframes glow pulse
Badge shift	.card.limited .type-badge	left:28px to clear the star (default is 9px)
Bottom banner	.limited-banner	Amber gradient band below card-body, outside image area
Hover glow	mouseenter handler (JS)	box-shadow: 0 14px 44px rgba(251,191,36,.25)
Resting glow	mouseleave handler (JS)	box-shadow: 0 0 18px rgba(251,191,36,.12) retained

To add a new limited item: add the item to ITEMS with limited: true and a limited_note string. No CSS changes needed.

10. Image Management

Images live in img/ alongside index.html. The HTML references them by relative path. Supported formats: JPG, PNG, WEBP.

Filename	Item	Format	Source / Notes
starter-ns.jpg	Nintendo Switch Starter Pack	JPG	Polygon.com — 1000x675

starter-ps4.png	PS4 / Xbox One Starter Pack	PNG	Uploaded manually — 862x680
sp-lance.jpg	Lance Starship Pack	JPG	PNP Distribution ref 1020 — 600x600

wp-crusher.jpg	Crusher + Shredder Mk.2	JPG	PNP Distribution ref 1024 — 600x600

11. Complete Source Code

The complete contents of `index.html` follow. This is the entire application — copy this into a file named `index.html` in a folder alongside the `img/` directory to fully restore the tracker.

[illegible]

```

1input::placeholder{color:var(--muted);}
.filter-row{display:flex;flex-wrap:wrap;gap:7px;margin-bottom:11px;align-items:center;}
.filter-label{font-family:'Rajdhani',sans-serif;font-size:9px;font-weight:700;letter-spacing:4px;text-transform:uppercase;color:var(--muted);margin-right:4px;white-space:nowrap;}
.filter-btn{background:rgba(2,8,16,.7);border:1px solid var(--border2);border-radius:2px;color:var(--muted2);cursor:pointer;font-family:'Rajdhani',sans-serif;font-size:12px;font-weight:700;letter-spacing:1.5px;text-transform:uppercase;padding:6px 16px;transition:all .15s;white-space:nowrap;clip-path:polygon(6px 0%,100% 0%,calc(100% - 6px) 100%,0% 100%);}
.filter-btn:hover{background:rgba(0,229,255,.08);color:var(--white);border-color:var(--cyan);}
.filter-btn.active{color:#000;border-color:transparent;}
.toolbar{display:flex;align-items:center;justify-content:space-between;flex-wrap:wrap;gap:10px;margin-bottom:8px;}

12. Rebuild Guide

Follow these steps to restore the tracker from scratch using only this document:

Step 1: Create the folder structure

Create a folder named `starlink/`. Inside it, create a subfolder named `img/`.

Step 2: Restore `index.html`

Copy the complete source code from Section 11 into a new file: `starlink/index.html`

Step 3: Restore images

Place all product photos listed in Section 10 into `starlink/img/` using the exact filenames shown. The HTML will show a text placeholder for any missing image — the tracker still functions without them.

Step 4: Open in browser

Open `starlink/index.html` in any modern browser. Chrome, Firefox, Edge, and Safari all support loading local images from the same folder without a server.

Step 5: If images do not load

Some browsers (strict Chrome) may block local file access. Run a local server: `cd` into the `starlink/` folder and run: `python3 -m http.server 8080` Then open `http://localhost:8080` in your browser.

Step 6: Restore owned state

If you have a previously exported JSON file, click Import and select it. Your owned items will be restored immediately.

Step 7: Add a new item

Add a new object to the `ITEMS` array in `index.html` following the schema in Section 3. Place the image in `img/` and reference it as `'img/filename.jpg'`. Save and refresh.

Step 8: Change an image

Replace the file in `img/` with the new photo using the same filename. Refresh the browser — no code changes needed.

End of Documentation
